

Dr. Kramann is Professor of Medicine and Chair of Nephro-Cardiology at RWTH Aachen University, Germany. He directs the Laboratory of Translational Kidney and Cardiovascular Research in the Division of Nephrology and Clinical Immunology (www.kramannlab.com) and is board certified physician for internal medicine and nephrology. He received his MD in cardiology at RWTH Aachen University in 2007 and completed postdoctoral training in the Laboratory of Benjamin Humphreys at Brigham and Women's Hospital, Harvard Medical School, Boston MA. Dr. Kramann's basic and translational research focusses on understanding cardiovascular disease in chronic kidney disease patients and organ fibrosis. He is aiming to develop novel targeted therapeutics in vascular sclerosis, fibrotic disease and heart failure. Dr Kramann's clinical research interests are focussing on vascular calcification and uremic cardiomyopathy. He has authored more than 60 primary research and review articles and he is recipient of various prestigious awards including the Stanley Shaldon Award of the European Renal Association (ERA-EDTA), the Nils Alwall and Carl Ludwig Awards of the German Society of Nephrology and the Grand Prize in the Harvard Innovation Lab Dean's Health and Lifescience Challenge.
